AIR WATER STUDIES WELLNESS
4.0 SOLUTIONS

The new welfare index
for our cows

ARIENTI's quality: equipment and accessories
for the well-being of your farm

BIG FAN mod. brushless

With the larger diameters and more technological airfoils of our ceiling fans you can combat heat stress and significantly reduce the discomfort of your animals.

VE900 naked, available also with protection net

Mounted directly on the feeding lane, combined with micro-irrigation for maximum functionality in reducing the animal's body heat

► FOGLIE D'ORO DELL'INNOVAZIONE

RO-TOR

Rotary fan, the purpose of which is to reduce the total number of devices required for a given barn configuration, with considerable cost and consumption reductions.

TOR 1430 (new model)

6-blade fan made of PVC. Fan suitable for aisle and waiting room cooling, small diameter with lightweight construction, perfect performance.

FAN JET

The ideal ventilation system in calf rearing. Thanks to the air volumes generated by the low-consumption fans, air quality is improved and bacteria, harmful gases and humidity are reduced.

Easy to install and with guaranteed results.

WATERING SYSTEM

Featuring a nozzle designed and manufactured for efficient wetting of the animal

THE ELECTRONIC SCRAPER WITH ROPE DRIVE

In the foreground is the maximum safety for the animals, which is always guaranteed by the electronic management system "TRUSTED SYSTEM", fully automatic and active in every phase of operation.

WINNER OF THE FIRST BELTRAMI PRIZE

Cremona fairs year **2005**
for its **TECHNOLOGICAL** and **INNOVATIVE** content!

ADDS NEW SOLUTIONS for new flexibility of use

The electronic control unit houses most of the advanced technology, such as the self-diagnostic system that detects faults and signals them.

The electronic control unit contains most of the latest technology, such as the self-diagnosis system that detects a fault and indicates its type. The innovation lies in the perfect combination of high-tech management with a drive system that is as simple as it is robust with low energy consumption.

APS CONTROL BOX
New generation
without mechanical
limit switch

Choosing SAFETY SCRAPER means:

- Ensuring maximum safety for animals thanks to its intelligent electronic management
- Reducing energy consumption by up to 80%.
- The possibility to program several operations during the day, with undeniable advantages such as: cleaner lanes, stronger and more robust animal hooves, cleaner and healthier resting areas
- Reduced blade size to avoid disturbing the cows in the lanes
- Reduced cleaning time (1 m every 15 seconds)
- Fully automatic programme management
- No maintenance required

No masonry work is needed in the lanes as the rope does not need as the rope does not need a cable channel.

With POLYESTER & STEEL cable

Aisles always
clean
and always
quiet animals

HIGH-QUALITY EQUIPMENT AND ACCESSORIES

FIXED OR MOTORISED WINDBREAK NETS

The sun and the wind are two forces of nature that, if you want, you can manage in your barns as you like, improving the wellbeing of your animals and their productivity.

It is not difficult, in fact it is simple and practical, with the installation of our shading and windbreak nets, of excellent construction quality and material used, to guarantee your cows a high reduction in the intensity of sunlight and wind force.

ADVANCEMENT

Automatic advancement is the ideal system to educate and accustom cows to advancing quietly, without scaring them or using violence.

PHOTOPERIOD LIGHTING

- ARILED lamps
- Constant lighting levels improve health and well-being
- +10/15% milk production per year
- Better night vision without disturbing animals
- Increased fertility

COW BRUSH

With COW BRUSH brushes you can achieve better blood circulation, better production performance, better heat dispersion in summer, better general cleanliness, fewer parasites on the skin, better general animal welfare
